An important message from David Dodge, CEO of CodaKid

Dear Parent,

Before enrolling in CodaKid's Game Development 1 with Roblox course, we wanted to provide you with some important safety information.

Roblox is a safe 3rd party game creation engine that is housed outside of the CodaKid platform. It is used by over 70M people all over the world, including thousands of schools and colleges.

Important Note: Roblox as a platform allows students over the age of 13 access to interactive multiplayer gaming and chat with fellow gamers. Many of our parents choose to restrict this feature for child safety reasons.

Students under the age of 13 are automatically restricted from all social functions, provided that when you register for your free Roblox account you put in the correct birth year of your child. Please ensure that this is performed correctly.

For parents of students age 13 and up who wish to disable Roblox multiplayer gaming, chat, and social functions, here are two important resources that will allow you to set up parental controls.

Roblox even provides you with a Parent PIN to prevent your child from using Settings to remove these restrictions.

CodaKid's course does not teach students how to use the social functions of the Roblox platform, but it is very important that you are aware of these capabilities so that you can monitor your child's activities.

Roblox is a fantastic game engine that provides an excellent way to teach kids coding and game design. But as with any web-based platform with social functions, whether it be Roblox, Xbox, PlayStation, or another, it is essential that you monitor your child's activities and inform him or her about internet safety.

If you have any questions or concerns about this, or would like assistance in setting up your parental controls please contact CodaKid at support@codakid.com and they will be happy to help!

Thank you,

David Dodge, CEO
CodaKid
